

QUALITY AND ENVIRONMENTAL POLICY

EMP Recycling (EMP) – the largest electronic waste recycling company in Lithuania and the Baltic States, operating since 1999. The main activity of the company is the collection and recycling of electrical and electronic equipment, non-ferrous and ferrous metals and precious metal waste by recovering valuable raw materials.

EMP mission - to recover as much value as possible from electrical and electronic equipment and metal waste.

EMP vision - the leader of electrical and electronic equipment waste recycling in the Baltic States.

EMP goals

- ✓ Creating a modern waste collection and recycling system;
- ✓ Increase the efficiency of waste recycling by recovering as many quality raw materials as possible;
- ✓ Implement new technologies and make operational processes more efficient;
- ✓ Educate the public by reaching people of all ages;

EMP commitments

- ✓ Comply with the legal requirements and obligations to interested parties applicable to the activity;
- ✓ Use natural resources economically, reduce negative impact on the environment;
- ✓ Systematically control the quality of products and processes, develop employees' competencies;
- ✓ Cooperate and support technological and scientific research in the field of waste management.

The quality and environmental policy is reviewed annually and is available to stakeholders
